

**Office of the City Controller
Pre-Audit Division – Engineering Unit
Traffic Safety: Speed Cushion Review**

February 2026

DRAFT

CITY OF PHILADELPHIA
PRE-AUDIT DIVISION – ENGINEERING UNIT
TRAFFIC SAFETY: SPEED CUSHION REVIEW
FEBRUARY 2026

EXECUTIVE SUMMARY

Why the Controller’s Office Conducted the Review

Over the past several years, the City of Philadelphia has passed legislation, amended its code and dedicated resources to install traffic calming infrastructure throughout the city. This infrastructure is designed to reduce travel speeds, creating a safer environment for pedestrians, drivers, and cyclists. Specifically, Council passed Ordinance 230103 in 2023, amending section §11-708 of the Philadelphia Code, to add traffic calming infrastructure around schools such as speed cushions. Speed cushions need to follow defined dimensions to allow traffic to move at or just below posted speeds. If they do not meet these dimensions, the grade could be too steep, which disrupts traffic flow, causes damage to motorists’ vehicles, impacts driver safety, or impedes the operation of emergency vehicles.

What the Controller’s Office Reviewed

The Controller’s Office reviewed the contracts and blueprints for the installation of speed cushions throughout the city. The Controller’s Engineering Unit received from the Streets Department a list of schools where traffic calming measures were installed and selected a sample to physically inspect speed cushion dimensions. By obtaining the height of the speed cushion and the length of the ramp, the engineers were able calculate the grade (or slope) of the speed cushions to determine whether the installations comply with the blueprint design and state and federal government standards.

What the Controller’s Office Found

Contract blueprints conformed to dimensions recommended by government guidelines, however, of the 140 speed cushions tested we found:

- Only two had both height and length measurements that were within the ranges specified in the blueprints.
- One-hundred and thirty-three (or 95 percent) of the speed cushions tested had grades (or slopes) exceeding the 10 percent specified in the blueprints and recommended by government guidelines resulting in speed cushions steeper than expected in a 10-20 mph school zone.
- Twenty-six of the 133 speed cushions had grades (or slopes) equal to or greater than twice the recommended grade.
- A review of Philly311 data recorded several concerns made by residents across the city about the safety of the speed cushions.
- The average cost for installing Speed cushions and other traffic calming infrastructure is estimated at \$51,000 per school, totaling \$2.2 million for the projects reviewed.

What the Controller’s Office Recommends

We recommend the speed cushions be made compliant to match the blueprints in the contract and if not, the city should seek restitution. To prevent further instances of noncompliance with government standards and blueprint designs, we recommend that Streets Department management provide closer supervision over the future installation of city speed cushions.

INTRODUCTION

In response to concerns from city residents about problems with the speed cushions being installed throughout the city, the Office of the City Controller (Controller’s Office) conducted a review of these traffic calming measures. Speed cushions are intentional bumps in the roadway, added to slow down the speed of automobiles, especially in high-volume pedestrian traffic areas, such as school zones. Speed cushions are used by local, state and federal departments of transportation and, when correctly installed, will reduce the travel speed of automobiles and increase safety for pedestrians and other vehicles.

The primary objectives of this review, performed by the Engineering Unit of the Controller’s Office Pre-Audit Division, were to determine whether constructed speed cushions conform to the blueprints included in the construction contracts, and to ensure that the design used by the city follows the best practices and recommendations obtained from state and federal agencies. This review also allowed the Engineering Unit to evaluate the city’s performance on the installment of traffic calming measures authorized by Ordinance 230103, which amended section §11-708 of the Philadelphia Code titled “Traffic Calming Measures for Schools”.

KEY FINDINGS

In March 2023, City Council passed Ordinance #230103 that required the Streets Department, the city agency responsible for the maintenance of city streets and roadways, to install traffic calming measures, such as speed cushions, speed tables or soft rumble strips, in the vicinity of Philadelphia District schools, charter schools, and private¹ city schools. Using the population of 135 schools that, to date, had received traffic calming measures addressed in this legislation, the Engineering Unit selected 44 schools for review. Among these 44 schools, 140 speed cushions were tested for compliance with dimensions in the contract blueprints and standards recognized by government agencies. While contract blueprints conformed to dimensions recommended by government guidelines, of the 140 speed cushions tested, our engineers found that:

- Only two had both height and length measurements that were within the ranges specified in the blueprints. Engineers observed 138 instances where one or both of the actual measurements did not agree with the intended dimensions. Specifically, engineers found that 37 (26 percent) of the speed cushions had a height (also known as the “rise”) greater than designated on the blueprints.
- One-hundred and thirty-three (or 95 percent) of the speed cushions tested had grades (or slopes) exceeding the 10 percent specified in the blueprints and recommended by

¹ Catholic Schools, also known as Archdiocesan Schools, are considered private schools under this Ordinance.

government guidelines. The height and length of the ramp can vary slightly as long as their quotient results in a grade equal to or near 10 percent.

- Twenty-seven of these 133 speed cushions had grades (or slopes) equal to or greater than twice the recommended grade, with one speed cushion having a grade of 33%.

Refer to **Table I** (on page 12) and **Appendix E** (on pages 28-31) for additional details regarding the engineers' inspections.

Speed cushions with grades exceeding government standards may create deflections in the roadway that are too steep for traffic movement, increasing the likelihood of unexpected damage to vehicles, compromising driver safety, and hindering emergency vehicle response, even when vehicles are traveling at posted speed limits.

BACKGROUND

In November 2016, the City of Philadelphia initiated its Vision Zero Action Plan with the goal of eliminating all traffic related fatalities and severe injuries within the city by 2030.² Vision Zero focuses on improving safety through infrastructure changes, education, and data driven decision-making.

Recent mayoral administrations have instituted policies to help the city reach its goal of zero traffic deaths. Since 2021, city budgets have allocated \$21 million to support the Vision Zero initiative. Two of the more significant programs under this plan include the Neighborhood Slow Zone and the Automated Speed Enforcement (ASE) programs. The Neighborhood Slow Zone program works with community organizations to co-design traffic calming solutions that best meet the needs of each neighborhood, while the Automated Speed Enforcement (ASE) program aims to enhance road safety by using speed cameras to monitor and penalize speeding vehicles.

The Vision Zero Plan also includes smaller initiatives such as Safe Routes Philly,³ and the Complete Streets programs which strive to provide pedestrian, bicycle and transit safety, through educational resources and activities and by the creation of safe, comfortable, and convenient streets for all Philadelphians.

Additionally, Philadelphia City Council has united with the city administration in its goal to eliminate traffic fatalities by passing legislation that supports the Vision Zero initiative. Specifically, in 2024, Council passed Ordinance #240657 reclassifying over 35 miles of curbside

lanes and all bike lanes into “No Stopping Anytime” zones.⁴ This law prohibits stopping, standing, or parking in bicycle lanes and increases the monetary penalties for these violations. Please refer to **Appendix A** on page 13. With an even greater impact on traffic control, in March 2023 City Council passed Ordinance #230103 that required the Streets Department to install traffic calming measures, such as speed cushions, speed tables or soft rumble strips, in the vicinity of Philadelphia District schools, charter schools, and private⁵ city schools. Refer to **Appendix B** on page 18.

Per the National Association of City Transportation Officials (NACTO), some of the most common traffic calming measures,⁶ as mentioned in the 2023 Ordinance, include:

- Speed Humps - curved vertical traffic calming devices intended to slow traffic speeds on low-volume, low-speed roads. Speed humps are 3–4 inches high and 12–14 feet wide, with a ramp length of 3–6 feet, depending on target speed. Speed humps reduce speeds to 15–20 miles per hour (mph) and are often referred to as “speed bumps” by the general public.
- Speed Tables – a long, flat-topped speed hump, designed to gently slow vehicles by raising the vehicle’s wheelbase. Speed tables are usually found at a pedestrian crossing and reduce speeds to 20-45 mph, allowing easier movement of emergency vehicles.
- Speed Cushions - Speed cushions are either speed humps or speed tables that include wheel cutouts to allow large vehicles to pass unaffected, while reducing passenger car speeds. They can be offset to allow unimpeded passage by emergency vehicles and are typically used on key emergency response routes. Speed cushions extend across one direction of travel from the centerline, with a longitudinal gap provided to allow wide wheelbase vehicles to avoid going over the hump.
- Rumble Strips are milled, raised elements on a street that create noise and vibration to alert

⁴ Mayor Cherelle L. Parker Signs Transportation-Related Bills | Department of Streets. (2024, December 4). City of Philadelphia. https://www.phila.gov/2024-12-04-mayor-cherelle-l-parker-signs-transportation-related-bills/?utm_source

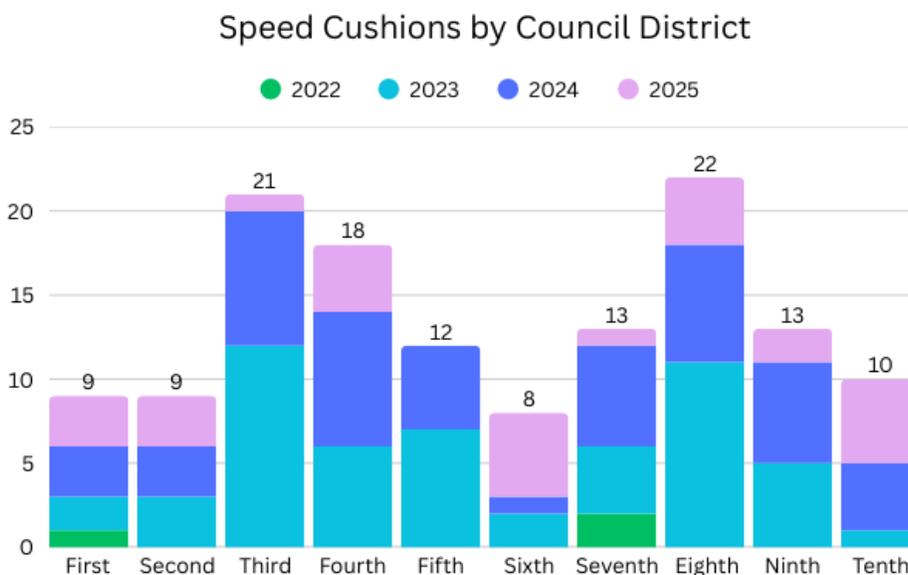

⁵ Catholic Schools, also known as Archdiocesan Schools, are considered private schools under this Ordinance.

⁶ Definitions and drawings obtained from the NATCO website. <https://nacto.org/publication/urban-street-design-guide/stret-design-elements/vertical-speed-control-elements/>

inattentive or drowsy drivers when they depart from their lane. While transportation agencies utilize these traffic calming measures for safety purposes, rumble strips are reported to cause noise issues for residents in areas where they are used.

Of the various traffic calming measures authorized above, the Streets Department and vendors installed speed cushions around 135 of the city’s 485 schools. Specifically, between 2023 and 2025, the Department demonstrated its commitment to the Vision Zero Plan by steadily increasing the cushions throughout the city, having completed 53 speed cushions in 2023, 51 in 2024 and 28 by the summer of 2025. Also, speed cushions were installed at three city schools prior to the enactment of the 2023 ordinance. For our testing purposes, these schools were classified as part of Vision Zero Plan and included in our review. As shown in **Chart I** below, speed cushions were installed in each of the ten council districts, with seven of the ten districts receiving traffic calming measures for eight to 13 schools in those districts. Also refer to **Appendix F** (page 32) for a map displaying schools and speed cushions by council district.

Chart 1: Speed Cushion by Council District

Source: Listing of Philadelphia Schools provided by the Streets Department

The cost of installing speed cushions around each school depends on whether the whole street is being resurfaced or if the speed cushions are added after the fact. Another determination is how wide the street is, the wider the street, more speed cushions are needed. When added as part of repaving, the asphalt costs \$200 per linear foot, or about \$2,200 per speed cushion. When the speed cushions are installed separately from repaving the costs range between \$2,400 and \$3,000 per speed cushion. When the paint, signs and flex post are included, the costs of the projects range between \$21,000 with nine speed cushions and \$113,000, with 13 speed cushions and 102 flex posts. An estimated average cost for each project totals \$51,000.

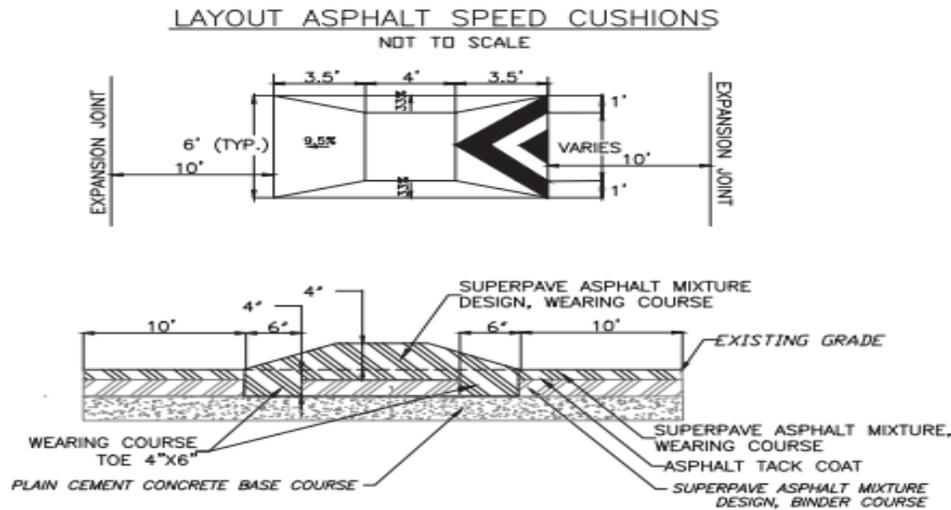

METHODOLOGY AND ANALYSIS

The Engineering Unit of the Pre-Audit Division began its review by obtaining a list from the Streets Department of all 491 public, charter, archdiocesan and private schools in the city. Six of the schools on the list were deemed ineligible for the traffic calming measures due to their location on major city thoroughfares like Broad Street, Market Street and Roosevelt Boulevard and were, therefore, removed from our testing for a revised population of 485 schools.

The Engineering Unit noted that the work for these projects was primarily performed by three contractors, although some of the installations were completed by the Streets Department itself or others as part of larger repaving projects. The contracts included blueprints that showed the design and dimensions of the speed cushions, along with specifications about the materials to be used during their installation. After taking the street's total width into account, the blueprints also included the number of cushions to be constructed for each specific site. Finally, the blueprints provide an aerial view of the schools, marking the designated speed cushion spots and signage locations on the streets bordering the schools. See **Appendix D** on page 27 for a copy of a full blueprint.

The Streets Department's blueprints were relatively consistent between schools with the only differences being the school location. The dimensions of the speed cushion are standardized across all blueprints. Per the blueprints, the speed cushion should typically be 11 feet long by 6 feet wide. The height should be four inches above the sub-pavement, and the ramps should be 3 ½ feet (or 42 inches) long, creating a grade of 9.5 percent. This would create a slope up and then a table followed by a slope down. The grade of the speed cushion is calculated by dividing the height of the ramp (i.e. the rise) by the length of the ramp (the run). Refer to **Exhibit I** below.

Exhibit I: Speed Cushion Design per Contract Blueprint

Traffic calming measures that are put directly on a roadway are designed to reduce speed to a certain range. That range is a function of the speed cushion’s grade. The steeper the grade, the slower traffic must travel over the cushion. Speed cushions are generally designed to have a height (rise) of three to four inches and a ramp length (run) between 36 - 42 inches. This usually creates a grade near 10 percent. At a 10 percent grade, traffic can travel over the speed cushion at 20 mph.⁷ Traffic calming measures with a grade steeper than 10 percent could require speed reductions far below posted speeds.

By comparison, speed bumps, which are commonly found in parking lots, have recommended dimensions of two to six inches in height and one to three feet in length. Given that the apex of the speed bump is in the middle, the distance traveled to the top of the speed bump is between six and 18 inches. This creates a grade range for speed bumps between 22 and 50 percent.⁸ Traffic calming measures with a grade as steep as a speed bump will slow traffic down to a speed between 2-5 mph.⁹ Using similar traffic calming measures in a roadway can create a grade that is too steep for traffic movement and could result in accidents or cause serious damage to vehicles even if they are traveling at the posted speed.

The Pennsylvania Department of Transportation (PennDOT), the United States Department of Transportation (USDOT) and NACTO all have similar dimensions in their guidelines. For speed

⁹ Parkhill, Margaret P.Eng, Rudolph Sooklall, M.A.Sc, Geni Bahar, P.Eng; “Updated Guidelines for the Design and Application of Speed Humps” 2007 [updated design guidelines for the design and application of speed humps parkhill\(1\).pdf](#)

cushions, they all recommend a dimension of six feet by 11 feet, with a height of between three and four inches above street level. PennDOT further states that there should be a “trend toward 3 to 3.5 inches in the maximum”. The ramp should be between 36 and 42 inches long. The height and length of the ramp can vary slightly as long as their quotient creates a grade of approximately ten percent. The higher the top of the speed cushion is above the street level, the longer the ramp needs to be to keep the grade within the recommended guidelines.

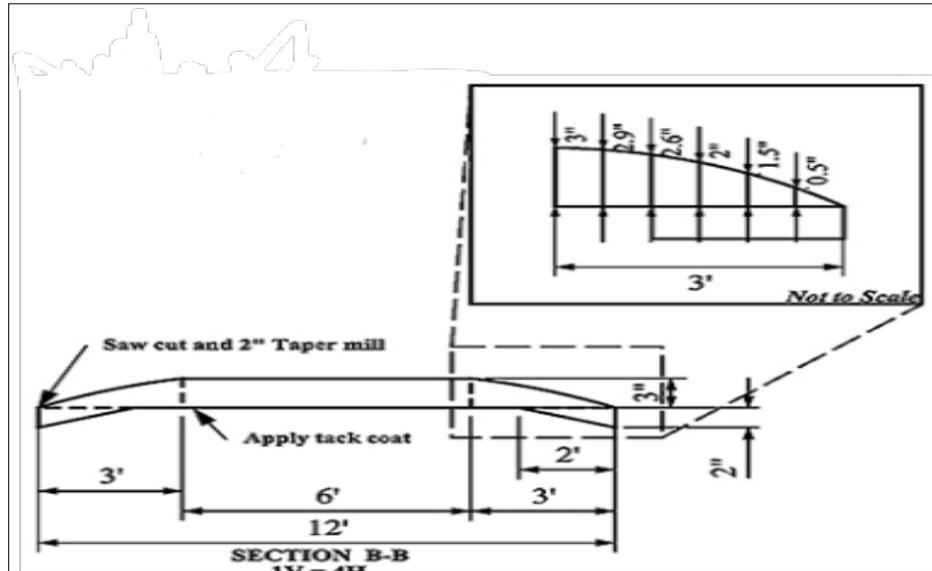

Refer to **Exhibits II, III, and IV** below for the guidelines adopted by the above government sources.

Exhibit II: PennDOT Design Criteria

TRAFFIC-CALMING MEASURE DESIGN FEATURES	TYPICAL DESIGN CRITERIA
DIMENSIONS	<ul style="list-style-type: none"> • 3 to 4 inches in height, with a trend toward 3 to 3.5 in maximum. • Speed humps and speed cushions are typically 12 to 14 ft in length in the direction of travel. • Speed tables are typically 22 ft in length in the direction of travel. • Speed cushions are typically 6 ft wide, and 10 to 11 ft long in the direction of travel, with a 2-ft gap. • Speed slots are typically 6 to 7 ft wide, and 22 ft in length in the direction of travel, with a 2 to 3-ft gap. • Slopes should not exceed 1:10 or be less steep than 1:25. • Side slopes on tapers should be no greater than 1:6. • The vertical lip should be no more than 0.25 in.

Exhibit IV: NACTO Speed Cushion Recommendations

Vertical speed control elements should be designed to the following criteria:

- ↳ Slopes should not exceed 1:10 or be less steep than 1:25.
- ↳ Side slopes on tapers should be no greater than 1:6.
- ↳ The vertical lip should be no more than a quarter-inch high.

Locate speed cushions where there is sufficient visibility and available lighting.

Source: Speed Cushion" – National Association of City Transportation Officials
<https://nacto.org/publication/urban-street-design-guide/street-design-elements/vertical-speed-control-elements/speed-cushion/>

From the population of 135 schools with speed cushions installed, the Engineering Unit randomly selected 44 schools for inspection of the speed cushions. With many of the schools having several speed cushions, the Unit checked the dimensions of 140 total speed cushions across the city, as well as striping and signage on the related streets. Measurements were limited to in-street speed

cushions since parking space cushions may not have regular measurements due to the increased slope of the street in the parking lanes. The Unit measured the height of each in-street speed cushion and the length of each ramp in order to determine the grade of each incline. Additionally, speed cushion inclines (or rise) were measured from the front of the cushion. Very few cushions had the tapered "table" shape of rubber cushions but instead showed more curved dimensions. Therefore, the Unit measured the incline of the cushion to the point where the curve started to lessen towards a flatter shape. Field measurements did not include the entire distance of the rise but rather, what was deemed a practical distance to accurately judge the slope.

TESTING RESULTS

Of the 140 speed cushions inspected, engineers found that:

- Contract blueprints conformed to dimensions recommended by PennDOT, USDOT, and NACTO guidelines.

Actual dimensions for 138 (99 percent) of the speed cushions did not match the design in the blueprints. Only the measurements for the speed cushion located at 2100 American Street for the Antonia Pantoja Charter School and one on Wakeling Street (for the Warren Harding Elementary School) conformed to the dimensions specified on the blueprint. This situation occurred because the dimensions cited in the blueprints

were standardized across all contracts, with the school location being the only change from contract to contract.

- A total of 130 (or 93 percent) of the speed cushions had runs that were significantly shorter than the blueprint designed standard of 36 to 42 inches. Some of the more significant observations, as shown in the photographs below, include:

Antonia Pantoja Charter School: Ramp Height = 4"

- The shortest ramp inspected was 12 inches at George Childs Elementary on 16th Street.
- Speed cushions on Huntingdon Street for the Allen Elementary School and on Baltimore Avenue for the Avery Harrington Elementary School had ramp lengths of 16 inches, less than half the required length specified in the blueprint designs.

*George Childs Elementary School:
Ramp = 12"*

*Allen Elementary School:
Ramp = 16"*

- Ramps for William Meredith School on Fitzwater Street, St. Mary's School on Fourth and Fifth Streets, and for Horatio Hackett School on Sepviva and York Streets, have measurements of 18 inches, exactly half the length required by their blueprints.

*Horatio Hackett Elementary School:
Ramp = 18"*

*St. Mary's Elementary School:
Ramp = 18"*

- Thirty-seven (or 26 percent) of the speed cushions tested had a rise greater than the three-to-four-inch range specified on the blueprints. Key observations, as evidenced in the photographs below, include:
 - One speed cushion at Henry Lawton Elementary that had a height (rise) of seven inches, three inches higher than the top of the blueprint range.
 - Franklin S. Edmonds Elementary School and Avery Harrington Elementary School had speed cushions on Gorgas Lane and Baltimore Avenue, respectively, that measured six inches high.

*Henry Lawton Elementary School:
Speed Cushion Height = 7”*

*Franklin S. Edmonds Elementary School:
Speed Cushion Height = 6”*

Avery Harrington Elementary School: Speed Cushion Height = 6”

These deviations in the height (rise) and length (run) measurements of the actual installations caused the overall grade (slope) of the speed cushion to exceed the ten percent standard specified in the blueprints and recommended by PennDOT, USDOT and NATCO. Specifically, the Engineering Unit noted that:

- One hundred and thirty-three (or 95 percent) of the installed speed cushions exceeded the ten percent grade standard, instead showing ranges between 11 and 33 percent.
- Of these 133 speed cushions, 27 showed grades over 20 percent, two to three times the required standard. The speed cushions with slopes equal to 25 percent were located at the following schools: Franklin S. Edmonds School on Gorgas Lane, St. Mary’s School on 4th Street, Mayfair Elementary School on Princeton Avenue, St. Francis Cabrini School on N. 65th Street, Dr. Ethel Allen Elementary School on Huntingdon Avenue and two cushions at Avery Harrington Elementary School on Baltimore Avenue.
- The steepest speed cushion was found at George Childs Elementary on 16th Street, with a grade of 33 percent, or over three times the specification in the blueprint.

Refer to **Table I** (below) and **Appendix E** (on pages 28 to 31) for additional details regarding the engineers’ observations.

TABLE I: SUMMARY OF ENGINEERS’ INSPECTIONS

	# of Inspection Exceptions		
	RISE	RUN	GRADE
Recommended Standard:	3-4”	36-42”	10%
# of Inspections Less Than the Recommended Standard	2	130	3
# of Inspections Within the Recommended Standard	101	9	4
# of Inspections Over the Recommended Standard	37	1	133
Total Number of Inspected Speed Cushions	140	140	140
# of Inspections Greater or Equal to Twice the Recommended 10% Grade			27

Source: Appendix E showing the detailed results of the engineers’ testing.

CITY DATA REPORTING COLLECTION

In addition to performing onsite inspections, the Controller’s Office reviewed Philly311 data—Philadelphia’s non-emergency customer service system—to identify any residents’ concerns related to the speed cushions. Throughout December 2024 and December 2025, the Philly311 system recorded several inquiries about speed cushions, primarily requesting to have them installed in areas where vehicles were reportedly traveling at high rates of speed. Additionally, the timestamp and location data indicated several concerns reported by residents, including (*text remains unedited*):

12/4/2024 – 19127

Caller is reporting that speed cushions at the subject location are too high and is causing damage to vehicles especially the under carriage. Speed cushions need to be lowered.

12/9/2024 - 19138

customer reports speed bumps installed on the block and in the surrounding area do not correspond to the posted speed limit, which can result in damage to vehicles if they're going the speed limit, also customer states the speed cushion signs are not properly placed to give the driver time to slow down

12/1/2025 - 19154

They placed ridiculously high speed bumps down Chalfont Drive and Fairdale Road with no signs of a speed bump and they are not painted for caution so every car is hitting them and bottoming out! Please paint these speed bumps.

12/9/2025 – 19138

Recently installed speed cushions are so tall that instead of driving over them, motorists are driving around them, into opposite lane, risking head on collision. On Washington Ln between Chew & Awbry St.

12/9/2025 – 19145

Speed bump is too steep and also not long enough which is causing a hazard for the vehicles that are passing over them at the proper speed limit and could potentially cause more damage than prevent it...black speed bump with paint faded off of the speed bump

12/12/2025 – 19116

The new speed cushions on Philmont Avenue are WAY too large and are damaging to vehicles.

CONCLUSIONS AND RECOMMENDATIONS

Since the onset of the Vision Zero Action Plan, the city administration has taken several important steps to help achieve its goal of eliminating all traffic related fatalities and severe injuries within the city by 2030. One of the most significant was the enactment of City Council Ordinance 230103 which intended to protect children by slowing traffic in school zones.

However, while the Streets Department had taken great strides to fulfill the intentions of the ordinance by installing speed cushions throughout the city, their efforts have fallen short of the ordinance's desired goal. For the ordinance to have the intended positive impact, the work performed must adhere to governmental standards and the blueprints that guide the actual installation of the traffic calming devices.

As noted earlier, using a rise of three to four inches and a run of 36-42 inches, the resulting grade of 10 percent would slow cars to 10-20 mph, a speed slow enough to allow drivers to timely and safely react to the impact of the speed cushion and the pedestrian activity in the area. However, modifying the height and/or length of a speed cushion can change the grade, and as outlined in this report, those changes may negatively impact its performance. When speed cushion grades are too low, they may be too flat to achieve the desired traffic control goal. When grades are too high or steep, there could be an increased risk of vehicle damage (such as tire blowouts, undercarriage damage, and suspension system strain), driver hazards (loss of control, possible accidents, or

increased hazards for motorcyclists or bicyclists), and operational impacts (such as hindering emergency vehicles or traffic movement to neighboring residential streets). Vehicles maneuvering through steep speed cushions may encounter these risks even when traveling at the posted speed limit.

To prevent further instances where dimensions are incorrectly applied to the installation of the city's speed cushion, we recommend that Streets Department management:

- Provide closer and timely oversight of contractors who are installing speed cushions around school zones. Management should consider measuring dimensions and recalculating the grades to ensure that the slope is in accordance with contract blueprints and government standards.
- Create a form to standardize speed cushions throughout the city.

To address the problems with the previously installed speed cushions, we recommend the speed cushions be made compliant to match the blueprints in the contract and if not, the city should seek restitution.

Appendix A: Council Ordinance 240657

City of Philadelphia

(Bill No. 240657)

AN ORDINANCE

Amending Title 12 of The Philadelphia Code, entitled “Traffic Code,” to prohibit stopping, standing, or parking a vehicle in a bicycle lane and to increase monetary penalties for illegally stopping, standing, or parking a vehicle in a bicycle lane, all under certain terms and conditions.

THE COUNCIL OF THE CITY OF PHILADELPHIA HEREBY ORDAINS:

Section 1. Chapter 12-900 of The Philadelphia Code is hereby amended to read as follows:

§ 12-913. Prohibitions in Specified Places.

(1) Except when necessary to avoid conflict with other traffic or to protect the safety of any person or vehicle or in compliance with law or the directions of a police officer or official traffic-control device, no person shall:

(a) Stop, stand or park a vehicle:

(.1) On the roadway side of any vehicle stopped or parked at the edge or curb of a street.

(.2) On a sidewalk except that a bicycle may be parked as provided in Section 12-807.

(.3) Within an intersection.

(.4) On a crosswalk.

(.5) Between a safety zone and the adjacent curb within thirty (30) feet of points on the curb immediately opposite the ends of a safety zone, unless a different length is indicated by official traffic-control devices.

(.6) Alongside or opposite any street excavation or obstruction when stopping, standing or parking would obstruct traffic.

(.7) On any railroad tracks.

(.8) In the area between roadways of a divided highway, including crossovers.

(.9) At any place where official signs prohibit stopping.

(.10) Where any part of the vehicle would block any part of a curb cut or handicapped ramp.

Appendix A: Council Ordinance 240657

City of Philadelphia

BILL NO. 240657 continued

Certified Copy

(.11) Within a designated bicycle lane.

(b) Stand or park a vehicle: ***

(c) Park a vehicle:

(1) Within fifty (50) feet of the nearest rail of a railroad crossing.

(2) For more than 20 minutes at any place where official signs prohibit parking.

[(3) Within a designated bicycle lane.]

* * *

Section 2. Chapter 12-2800 of The Philadelphia Code is hereby amended to read as follows:

§ 12-2809. Civil Penalties and Costs.

* * *

(2) Basic Penalties.

(a) Any person violating the following provisions of Title 12 shall, upon a final finding of liability pursuant to this Chapter 12-2800, be liable for payment of the civil penalty indicated, in addition to the costs and fees set forth in subsection 12-2809(1):

Code Provision	Violation Description	Penalty
	* * *	
12-913(1)(a)	Stopping, Standing, Parking - Prohib Place	
	* * *	
	(.11) Within a designated bicycle lane.	\$75
	* * *	
12-913(1)(c)	Parking – Prohib Place	
	(.1) Near Railroad Crossing	\$30
	(.2) Disobey Signs – Prohib Parking	\$40

Appendix A: Council Ordinance 240657

City of Philadelphia

BILL NO. 240657 continued

Certified Copy

[(.3) Block Bicycle Lane \$50]

* * *

(b) Any person violating the following provisions of Title 12 in the Center City area, bounded by Spring Garden street, Bainbridge street, the Schuylkill River and the Delaware River, or in the University City area, bounded by the Schuylkill River on the east, University avenue/Woodland avenue on the south, Fortieth street on the west, and by a line along Filbert street, between Fortieth street and Thirty-fourth street, along Thirty-fourth street to Arch street, along Arch street, between Thirty-fourth street and the Schuylkill River, on the north, shall, upon a final finding of liability pursuant to this Chapter 12-2800, be liable for the payment of the civil penalty indicated, in addition to the costs and fees set forth in subsection 12-2809(1):

Code Provision	Violation Description	Penalty
	* * *

Elizabeth McCollum
Interim Chief Clerk of the City Council

Appendix B: Council Ordinance 230103

City of Philadelphia

(Bill No. 230103)

AN ORDINANCE

Amending Chapter 11-700 of The Philadelphia Code, entitled “Right-of-Way Management,” by authorizing the Department of Streets to install traffic calming measures in the vicinity of School District schools, Charter schools, and private schools; all under certain terms and conditions.

THE COUNCIL OF THE CITY OF PHILADELPHIA HEREBY ORDAINS:

SECTION 1. Chapter 11-700 of The Philadelphia Code is hereby amended to read as follows:

* * *

CHAPTER 11-700. RIGHT-OF-WAY MANAGEMENT.

* * *

§ 11-708. Traffic Calming Measures For Schools.

- (1) Legislative Intent. It is the purpose of this legislation to prevent school-aged pedestrians from being struck by vehicles while walking to schools in the City of Philadelphia.*
- (2) Required Traffic Calming Measures. The Department, in consultation with the School District, is authorized to install traffic calming measures on streets in the vicinity of School District schools, including Charter Schools, and private schools as designated by the Department. Such traffic calming measures shall include, but not be limited to, speed cushions, speed tables, soft rumble strips, and other measures the Department deems to be necessary.*

* * *

SECTION 2. This Ordinance shall be effective immediately.

Explanation:

Italics indicate new matter added.
